Thermal-Reactive Foam™ Gets More Comfortable With Wear.

E•A•R Classic Soft earplugs are made of a patented thermal-reactive foam used by the NASA space program. The material feels smoother than ordinary foam, and starts out firm to allow for easy insertion. Then, the plugs warm with the body temperature. They actually soften and shape to the ear canal. This “custom,” low pressure seal helps provide an excellent **NRR of 31 dB**. Better yet, the plugs get even softer and more comfortable with extended wear.

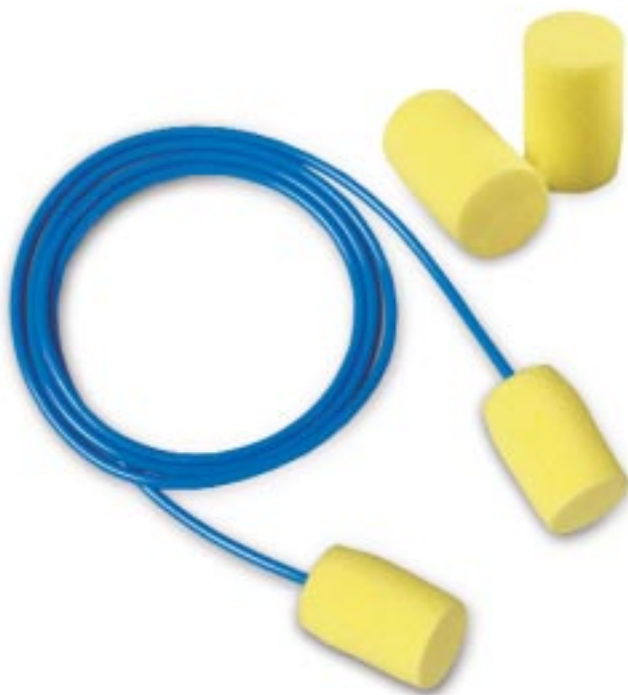

Take comfort to a higher degree – 98.6°F.

NEW E•A•R® Classic Soft™ Earplugs

E•A•R® Classic Soft™ Earplugs
Another leading advancement in hearing protection.

How to Order

E•A•R Classic Soft Earplugs are available corded or uncorded. Dispenser boxes contain 200 pairs in polybags. 10 Dispensers per case.

Not Just A New Plug, A Whole New Foam

E•A•R Classic Soft earplugs will change the way people “feel” about foam earplugs – because they feel entirely different. Made of a patented new foam, these plugs have a smaller cell structure and feel smoother “to the touch” than other foam. But that’s just the beginning, the foam plugs actually react to the wearer’s body temperature.

Smoother plug surface.

Thermal-Reactive: Soft Gets Even Softer.

The new plugs start out firm enough to make roll-down and insertion easy. As the foam warms to the body temperature, it becomes even softer and shapes to the individual’s ear canal. This “shaping” allows the plugs to form an excellent seal against noise (NRR 31 dB) and, as time goes on, the foam continues to soften for added comfort.

Proven Shape, Ultimate Performance

E•A•R Classic Soft earplugs feature the tested and proven cylindrical shape – the world’s most popular shape for earplugs. Combine this shape with the attributes of the foam, and you get the ultimate in comfort and performance for extended wear earplugs.
