Aearo Company

**Introducing  
Lexa Eyewear**

**A Better Way to Look...  
A Whole New Way to See.**

Take a good look at the lens of LEXA eyewear. Not much to see, is there? That's the beauty of it. Its refined, sleek design is totally unobtrusive - virtually invisible to the wearer.

There's no need for a bulky brow guard because the contour lens provides the same brow coverage as any brow guard. No distracting sideshields to reduce peripheral vision. Absolutely nothing to block or distort a person's vision. Instead, the engineered optics of LEXA eyewear widen the viewing range. Side to side. Up and down. All around.

# Open Your Eyes to Lexa.

## It's a Whole New Way to See.

### Contoured Coverage.

So formfitting, it's like every pair is custom molded.

The optical specialists at AOSafety designed LEXA eyewear to not just span across the face, but to curve around it. The patented shape follows and blends with the facial outline to provide optimum, full coverage. Never before has eye protection looked so good and felt so natural.

Contoured Coverage

### DX™ Anti-Fog Lens Coating.

Resists fogging, scratching, static and chemical attack.

Others have tried, but no polycarbonate lens coating has ever outperformed DX™ Anti-Fog Lens Coating from AOSafety. It resists scratches, static, and most commonly used chemicals. And it minimizes fogging in even the toughest working conditions.

DX™ Anti-fog Coating

### Two Lens Sizes

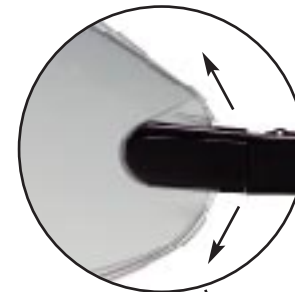

Workers' faces are different sizes. LEXA comes in different sizes.

LEXA are available with a Medium or Large lens to meet the needs of most workers. Now you can confidently fit your employees with the size that provides the best combination of comfort, coverage and fit.

### Adjustability.

People don't have to adapt to LEXA eyewear. It adapts to them.

The days of a person having to accept the fit limitations of a pair of safety glasses are over. Wearers can adjust LEXA to their own preferences. There's a choice of three different lens angles, and four different temple lengths.

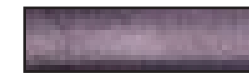

Lens Angle Adjustment

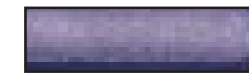

Temple Length Adjustment

### Metallic Frame Colors.

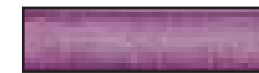

Without a doubt, LEXA eyewear is a whole new kind of safety glass. So it made sense to offer it in a whole new selection of Metallic Colors. Slate, Blue and Purple. Three great choices for both men and women. Only AOSafety could make a safety glass with this much class.

### Easy-Change™ Lenses

For different tasks and environments, and for saving money.

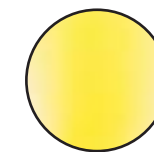

They say one of the few constants in life is change. Not a problem with LEXA eyewear. There are different lenses available to meet a variety of job requirements or personal tastes. Making the switch is easy. The temples and nosepiece just snap off-and-on. And you'll see a savings by using economical replacement lenses.
